The main advantage over some of the other remote control programs is that it can support a much wider range of hardware. It may also be cheaper, as long as you're not bothered about the quality of the remote control (ie using multiple screens and yucky keyboards).

Tutorials for it are given here. WinPass is a good option for remote control, as it includes passwords, tokens, files and even your startup applications. Your mission, should you choose to accept it, is to travel through four cities: Los Angeles, New York, London, and Brussels. For the first two cities, you are encouraged to see the places as they are shown in the game's media and art, but for the third and fourth cities, you are given three days to see and experience the cities through your own point of view. The one thing you have to do to receive the

WinPass makes it possible to keep your login and account information secure and available whenever you need them, while keeping a record of the information you have stored. WinPass is a multi-user password keeper that is private and secure, and will give you complete control over your passwords and your accounts, adding notes, locking passwords, protecting files, and much more. WinPass works on any Windows computer that has the standard Java installed. The application starts with a simple, clean interface that contains all the features you need to keep your information organized and secure. Once you have added new passwords, notes or files, click the Checkbox of each entry and WinPass will validate your data. All data added to WinPass is encrypted and password protected, so you can be sure it's not being read by anyone. WinPass has a very powerful system editor, which lets you add notes, passwords, files or even a password for programs. This editor gives you complete control over how your data is stored in WinPass. You can also move items between categories and set the category icon to be displayed. When you lock a group of passwords, or categories WinPass will prompt you for a Master Password, which will be used to decrypt all items that were encrypted using that Master Password. This Master Password is not stored in WinPass. When the application is locked, or closed, the master password is hidden in a registry key with a single password that must be entered to unlock it, and as soon as you start WinPass up again, all your data is stored with the new password. WinPass features: Password Keeper Keeps a list of all your logins, passwords, accounts, notes and files Private and secure - all your data is encrypted and password protected Automatically unlock when launched Hidden Master Password, which must be entered to unlock any data Keyboard autocomplete Choice of using the standard Java Font or using TTF to save disk space Choose the color of the keys, background and foreground Favorite category icon will display when data is in that category Hide the category icon when data is not in that category When you enter a login and password combo, WinPass will validate that you have the correct login and password for the account. After entering information, you have the option to add a note, choose to hide the account, or lock the account. Locking an account will prompt a master password to be entered. The notes screen allows you to type information and add
