ZW GI to ISO is a lightweight, free and extremely easy to use piece of software that provides you with the possibility to concatenate the distinct parts of a GI disk image into a single ISO file so you can burn it onto a CD or DVD. The software has been designed to be extremely easy to install and use. In just few seconds you can install and forget it. This easy interface allows you a very quick and easy to use software that will allow you to use a friend disc or a bootable flash drive without asking for credentials, without worrying about the integrity of the disc (as the software will always check everything). You can burn your created images into a CD or DVD, you can also burn the final copy directly on a hard drive or a USB flash drive. The things that are missing are related to the needed drivers, the need for a free burner (e.g. CD/DVD Burning Free), and the need for a free burning program (like Free ISO Creator). ZW GI to ISO can not burn the image directly from ZW GI, it needs to be already created from either a CD or from a disk image file. No need to download and install from source. 1. Why the space between the GUI and the applications folder after installing it? It should have an icon that says zgupd.exe, but there's no icon. Is the icon missing because ZG is not yet installed. 2. I have some issues with my log in to ZG and the control panel. The login to ZG asks me for a username and password. Should it not be the same as Windows live ID? 3. I have the ISO of the program I want to use (zwupd
