What's New in the Smart Eject?

The standard Windows Media Player makes it easy to play your media collection by automatically detecting what's on your system and automatically launching media that you want to play. But what if you've forgotten which discs you want to play? Or what if you want to change the program that handles your discs? Or what if you want to put your discs away on a different drive? Smart Eject helps you deal with all of these problems. It enables you to easily take out your discs and puts them away at any time and at any location. Features: - Eject your media even if your PC is powered down or suspended. - Stop your media from playing on your PC after media removal and notification. - Store your discs in a specified place. - Show your discs by icon or text in Windows Explorer. - Preview your discs by icons or text in Windows Explorer. - Put your media away in a specific folder or drive. - Sort your media by title or author. - Display your media collection in a Tree list. - Create thumbnail icons for your discs. - Make your discs manageable with a help file. Screenshots: Smart Eject.rar (contains the Smart Eject.exe application only) Smart Eject.zip (contains the Smart Eject.exe application and the help file) Installation: Read the README file and follow the instructions in the zip file. Notes: - This program uses the standard Media Player. - You can change the default program to any program you want to handle the CDs - If you use the .NET Framework in your PC, you can't modify the registry to run this program. - If you use the free Visual C++ 6, the program will run fine. You can also download the full Visual C++ 6 (The latest version of Visual C++ can be downloaded from here) and install it. - You can use XBMC (XBMC is a free media player you can install for Windows) or any Media Player to handle your CDs. Known issues: - Windows Vista 64bit and 7 64bit support problem. - WinRAR doesn't work on 64bit OS and the program don't make a problem with file. In my personal experience it works fine on Windows 7 and Windows 10. You should be able to modify the right click menu to add additional actions. A: I recommend using WinDVD 11 as your media player. It is free (as in, costs you nothing), and will handle all your CDs for you. You can use the "smart eject" option to prevent the CDs from auto-playing, but you don't have to. You can open up WinDVD, and right click on the disc you want to open, select the "open" option, and it will open up the disc using WinDVD, and

System Requirements:

Memory: 8 GB (MEM), 8 GB (VRAM) Video: NVIDIA GTX 1080 / AMD RX 480 or better OS: Windows 10 or Windows 7/8.1/8/8.1 with Service Pack 2 or higher Sound: DirectX 9.0c-compatible or later sound card Input devices: Keyboard and mouse are recommended. Hard Drive: 1 GB of free space Microsoft Visual Studio 2015 (for C++ and C# only) Additional disk space: 16 GB Additional disk space: 16
